On the cover. Trent 60 WLE plants generate 950MW at 49% efficiency for RWE at a German CHP facility (Photo credit: RWE Group)

7 Intro to simple cycle plant ratings

Design rating conditions, service-related changes in power and efficiency, conversion factors for evaluating performance

12 Simple cycle electric power plants

Design ratings for over 200 production gas turbine designs for 50-Hz and 60-Hz electric power and cogeneration projects

24 Intro to combined cycle ratings

Impact of key design parameters and engineering tradeoffs on published combined cycle plant output and efficiency ratings

28 Combined cycle power generation

Design ratings for single- and multi-shaft combined cycle reference plants optimized for electric power and CHP operation

38 Simple cycle mechanical drives

Direct shaft coupling and geared output gas turbine designs for oil & gas, petrochemical and offshore platform operation

42 Marine gas turbine ratings

Design ratings for marine gas turbine engines for waterjet, electric drive and propeller shaft ship propulsion systems

7F 3-series gas turbine

Ten-minute start-up design is rated at 184.9 MW and 38.0% simple cycle efficiency for 60Hz power, *page 15*

5000F combined cycle

SCC6-5000F Flex 30 combined cycle plant rated at 307 MW and 57% efficiency, capable of daily cycling, *page 35*

Mech drive

RB211-G62 compressor drives on all three WEPP pipelines in China are rated at 37,465 hp and 37.8% efficiency, *page 40*

German F125 Frigate

LM2500+G4 marine propulsion gas turbine rated at 47,370 hp and 0.352 lb/hp-hr SFC for 39.5% efficiency, *page 43*
