

On the Cover

Mitsubishi Hitachi M501J.

Air-cooled JAC version for 60-Hz generation is rated at 370 MW and 42.6% efficiency. Combined Cycle 1x1 power block is rated at 540 MW net output with 63.1% efficiency.

Production Models

- 8 New design units**
Over the last five years
- 12 Upgraded designs**
Power and heat rate
- 16 Discontinued units**
Not being built anymore
- 17 Market Outlook**
Unit orders and outages

SC Genset Prices

- 24 Scope of supply**
Basic bare bones plant
- 27 Benchmark prices**
Equipment-only \$/kW

CC Plant Prices

- 30 Cost factors**
Engineering tradeoffs
- 32 Scope of supply**
Power block and BOP
- 35 Benchmark prices**
Erected \$/kW plant

Mech Drive Prices

- 37 Scope of supply**
Skid-mounted gas turbine
- 40 Benchmark prices**
Equipment-only \$/hp

Simple Cycle Specs

- 46 Rating conditions**
Set by industry standards
- 49 Genset design ratings**
Latest performance data

Combined Cycle Specs

- 62 Rating conditions**
Depends on the supplier
- 65 Total plant ratings**
Latest performance data

Mechanical Drive Specs

- 75 Rating conditions**
Set by industry standards
- 78 OEM model ratings**
Latest performance data

Marine Drive Specs

- 82 Rating conditions**
Set by industry standards
- 84 OEM model ratings**
Latest performance data

Orders and Installations

- 86 Regional markets**
Africa and Middle East,
Central and South
America, Europe,
Far East and Pacific,
North America
- 87 Powerplant data**
Site, rating, GT model, fuel

Supply Chain

- 109 Company directory**
Product and service providers

Index to Suppliers

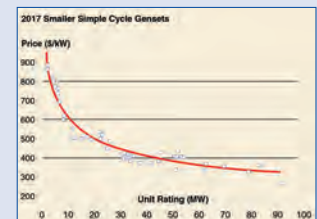

- 142 Project Development**
Consulting and EPC services
- 146 Gas turbine plants**
Type, size and application
- 148 Plant construction**
BOP equipment and auxiliaries
- 154 On-Site support**
Routine servicing and maintenance
- 157 Overhaul and rebuild**
Replacement parts and services

Editorial Abstracts

Simple cycle prices

Data plots and “best fit” curves show the strong relationship of price to output rating, especially for smaller units that cost considerably more on a \$ per kW basis than larger plants.

Combined cycle prices

Reported budget prices for 1x1 and 2x1 plants also serve as a benchmark to ballpark the price of unlisted combined cycle plants comparable in power output and efficiency.

Mechanical drive prices

Reported budget prices are for one or two-unit buys; large multi-unit gas turbine orders with phased delivery give buyers bargaining leverage to negotiate sizeable discounts.
